

2021

**World Health  
Organization**

Department of Environment, Climate Change and Health

For 50 years, the Monographs Programme of the International Agency for Research on Cancer has identified the preventable causes of human cancer. Its Working Groups of experts have evaluated the carcinogenic hazard posed by more than 1000 chemical, biological, and physical agents, as well as complex mixtures, occupational circumstances, and other exposures of everyday life. In this presentation, the modernized methods for evaluating and integrating three streams of evidence (human cancer, cancer bioassays, and mechanistic data) will be described, along with Advisory Group recommendations of priorities for evaluation during the next several years.

## **The IARC Monographs on the Identification of Carcinogenic Hazards to Humans: Modernized methods for evidence integration, and priorities for future evaluations**

Webinar

**Tuesday, 16 February 2021**

**WHO Chemical Risk Assessment Network institutions, public health professionals and risk assessors with an interest in transdisciplinary approaches to hazard and risk assessment are invited to join us for a webinar on 16 February 2021. This webinar is part of an ongoing series of Network webinars throughout 2020 and 2021. This online event will take place from 14:00-15:30 (UTC+1/CET).**
